Skills

- Java | JavaScript | TypeScript | Python | Rails | Html | jQuery
- ReactJs | SpringBoot | Hibernate | NodeJS | ExpressJs | Docker | Git | GitHub | MongoDB | SQL
- Microservices | Frontend | Backend | Full-Stack

Experience

Software Development Engineer

Shipmnts

Ahmedabad, Gujarat

01/2024 - present

- Orchestrated the development of applications with 30-40 engineers using **ReactJS, Ruby on Rails, GraphQL**, Postgres, and MongoDB; achieved a 10% increase in development speed and system efficiency.
- Directed a comprehensive overhaul of the frontend codebase, spearheading the creation of a **robust library** that serves as the foundation for all future organizational applications. This initiative enhanced **code reusability and maintainability by 30%**.
- Collaborated closely with a 4-person team to develop and integrate **custom fields**, enhancing functionality and meeting international standards, resulting in over a **50% reduction in compliance issues**.
- Collaborated with a team of three to **consolidate legacy repositories, reducing API calls by 10%-15%, optimizing logic, improving user experience**, and accelerating **query and search operations by 5%**, enhancing overall system performance.

Software Engineer

Freelancer

Vadodara, Gujarat

06/2023 – 11/2023

- Delivered a tool to automate printing cost calculations involving 15-20 fields, slashing manual data entry time by **80%** using **ReactJS, NodeJS, and ElectronJs**.
- Implemented a system to revisit and modify previous orders for repeat clients, streamlining the process and reducing order handling time by **90%**.
- Created a feature to keep records of every order within the software, allowing users to export records to Excel, improving data accessibility and reducing record retrieval time by **100%**.
- User's software enabled sending detailed order details and bills to clients via Email and WhatsApp with just 2-3 clicks.

Projects

Turbine (IDE) | [Video](#) | [Github](#)

ReactJs, NodeJS, ElectronJs

- Introduced separate **visualizers for Binary Trees** and Matrices, enhancing the user's ability to comprehend and analyses different data inputs.
- Designed a function suggestion system based on the user's prior code, promoting code reusability, and accelerating the development process by more than **30secs**.
- Seamlessly integrated a feature allowing users to input a LeetCode question's name and instantly access comprehensive details directly within the IDE.

Tree Visualizer | [Web](#) | [Github](#)

ReactJs

- Created a **dynamic Interactive Tree Builder** for level order or edge list data input, facilitating real-time visualization and increasing programming contest **productivity by 50%**.

Microservices | [Github](#)

Java, SpringBoot, Microservices

- Developed and implemented a **microservices based application**, enhancing modularity and fault tolerance by 20% to 30%, while reducing server downtime by through optimized service orchestration and redundancy.
- Engineered comprehensive features utilizing **Spring Cloud, Config Server, Discovery Client, ApiGateway**, and **Service Registry** to facilitate seamless orchestration and ensure robust service communication.

Quickfill | [Web](#) | [Github](#)

ReactJs, Tailwind, Chrome Extension

- Founded Quickfill to automate **form-filling** with a **single click**, eliminating repetitive data entry and saving **80% of users' time**.
- Stores all information **locally on the user's device, ensuring maximum privacy** and data security without relying on external servers.
- Designed for ease of use, Quickfill provides a convenient and efficient way to complete online forms, enhancing productivity and user satisfaction.

Education

Btech

Dharmsinh Desai University

Nadiad, Gujarat

10/2020 - 05/2024

- Information Technology
- CPI: 8.5

Hackathons

DuHacks | [Devfolio](#) | [Github](#)

ReactJs, NodeJS, ElectronJs

- Achieved **3rd national-level** and **1st college-level** ranks while leading the development of Project **TURBINE (IDE)**.

Achievements

- Achieved a **rank of 89** globally in the May Lunchtime Contest on Codechef.
- Secured a **position of 239** in the LeetCode Biweekly Contest 96 on a global scale.
- Selected for the second round of presentation in the **GFG X Google Cloud** competition.
